SUMMARY

Full stack software engineer with 8 years of experience, specializing in modernizing legacy software and creating AI-augmented applications. Proven track record migrating enterprise .NET and frontend systems to modern architectures, with hands-on experience integrating AI into production workflows.

TECHNICAL SKILLS

- Languages: JavaScript/TypeScript, C#, SQL
- Backend: .NET Core, ASP.NET, Nodejs, Microservices
- Frontend: Vuejs, Nuxt, Vite, TailwindCSS, HTML, CSS
- Cloud & DevOps: Azure, AWS, Git, CI/CD
- Data & AI: SQL Server, MySQL, Supabase, Redis, AI-Augmented Development (Claude Code), Relational Databases
- Tools & Testing: Unit Testing, Integration Testing, Bash, Linux, RabbitMQ, Agile, Scrum

PROFESSIONAL EXPERIENCE

International Student Mentorship Program | *Mentor & Software Developer* May 2025 - Present

- Architected and deployed a mobile-first English language web application using AI-augmented workflows (Claude Code) alongside TypeScript, Vue.js/Nuxt, Node.js, and Supabase
- Managed and mentored a student ambassador marketing team, guiding them through campaign strategy and graphic design
- Orchestrated complex logistics for university student programs to promote international community building

Moody Bible Institute | *Software Developer* Aug 2021 - May 2025

- Led migration of core enterprise applications from legacy .NET Framework to .NET Core 8, resulting in a 40% improvement in application performance and reduced infrastructure costs
- Engineered a secure, high-traffic public donations portal using TypeScript with Vue.js, Vite, and Tailwind CSS, integrating Stripe and .NET Core API endpoints to streamline financial processing and improve donor experience
- Overhauled identity management system, migrating legacy AngularJS UI to a modern Vue.js architecture, achieving 100% feature parity while enhancing administrative efficiency and UI performance
- Optimized high-volume processes in enterprise Salesforce using a message system using gRPC and RabbitMQ

Ignidus Technology | *Software Engineer* Jul 2018 - Aug 2021

- Designed a comprehensive suite of RESTful APIs for an insurance mobile app, leveraging PHP and Firebase for real-time data synchronization and Wallet Pass technology for digital policy management
- Enhanced application reliability using distributed queueing system with Redis and PHP, preventing up to 25% of process timeouts
- Automated core processes using a document generation engine with PDF Toolkit, resulting in 10% performance gain for users

UNC Lineberger Comprehensive Cancer Center | *Web Developer* Nov 2017 - Jul 2018

- Re-engineered a bioinformatics web app using React and Nodejs from a legacy Java app, increasing performance by over 50%
- Implemented CRUD API Endpoints in Nodejs and Oracle for biology research data processing

PROJECTS

Japanese Language Dashboard

- Created a TypeScript and Vue.js dashboard leveraging Claude Code for personal Japanese language study
- Generated sentence reading and speaking practice that checks pronunciation through Web Speech API
- Dynamic vocabulary listening and quiz generator using WaniKani API integration
- Enhanced conversation practice by integrating Web Speech API with Claude API to simulate real-time dialogue and provide AI-driven feedback

Beleriand Realms

- Implemented a Tolkien world based deck-building Vuejs and Typescript game, utilizing Claude Code and Gemini Pro
- Applied AI-augmented workflows for system design, business logic debugging, and UI creation in a complex stateful application

EDUCATION

UNIVERSITY OF CALIFORNIA, SAN DIEGO

GRADUATED JUNE 2017

B.A. Cognitive Science
